As a previous zen monk with over 15 years of experience in construction, I bring a diverse and user-centered approach to software engineering. My skills and experience allow me to seamlessly take feedback and improve my code, while also asking questions when needed. Paired with a love of technology, I also thrive on working in fast paced environments to build and improve applications.

SKILLS

- Programming Languages: JavaScript, CSS, HTML, Ruby
- Frameworks: React, Ruby on Rails
- Databases: AirTable, Firebase, Express, MongoDB
- Tools: Bootstrap, TailWinds

RELEVANT EXPERIENCE

Software Engineering Immersive | General Assembly | Remote | Month Year – Month Year

Successfully completed 500+ hours of expert led instruction in JS, ReactJs and hands-on learning of React fundamentals and the industry's most in demand technologies. Developed projects, including:

- Yug.io[GitHub]: JavaScript, CSS, HTML [See it here](#)
    A card game where you battle the computer with randomly drawn cards from the popular game Yugioh.
- Maze Running[GitHub]: React, Airtable, CSS - [See it here](#)
    A game where you get to choose from one of four mazes and are timed.
- VolunteerApp[Front-end:Github, Back-end:Github]: React, Express, MongoDB - [See it here](#)
    An app to help non profits find volunteers.
- FastingHelper[Github]: React, Ruby on Rails, React Icons - [See it here](#)
    A mobile app to help people with there fasting journeys

Land Manager | Tara Mandala | Pagosa Springs, CO | July, 2021–October 2021

- Managed 700 acres of property including four large buildings and over 30 cabins on my own.
- Part of a team of people to maintain the property and the functions of the temple. Including preparations for large events, which included making plans closely with the Ops director.
- Each cabin had about 4 solar panels, we had about 30 cabins. My job was to maintain the wiring between the AC/DC converters. When the converters were broken I would have to replace the wiring or the converter itself as well.

Facilities/Project Manager | Providence Zen Center | Providence, RI | April '16 to April '21

- Management Team, my role was largely overlooking the maintenance of the building and the large scope of the land itself. Meaning that I had to oversee the long term goals of the temple as a whole as well. Watched the budget of both the Kitchen and food expenses as well as managing the expenses of the maintenance.
- Managed a team of up to 10 people at times for projects either gardening or light work around the buildings. Overseeing both what and how they were tackling the projects. Both for gardening and construction.
- Lived as a monk here, I oversaw the daily life of the temple as well as teaching meditation daily

EDUCATION AND CERTIFICATES

General Assembly | SEI Immersive | Remote, NYC

Udemy | JavaScript Course, React Course, Data Structures and Algorithms
